DATADOG

Why Anything

Datadog is scaling rapidly as an organization - growing their current product suite of 30 products to 50 products. The TS team has KPIs as it relates to employee productivity (with a goal of 25% efficiency gains) therefore has been tasked to explore and identify solutions to enhance the quality and efficiency of SEs, TAMs, and TSEs at DD through the use of knowledge management & machine learning, and in particular Generative AI.

Why Now

Datadog IT team has currently deployed Google Cloud Search across the company. The platform has seen poor usage and low satisfaction scores. The team is in the process of replacing GCS and is currently evaluating Glean, Atolio, and Agentspace. They have identified that they will not be able to achieve employee productivity KPIs without a solution in place.

Why Glean

- Knowledge Silos: The growing number of apps used across different teams has created consequential knowledge silos making it difficult for Datadog Employees to find the relevant information they need quickly.
- Turn-key horizontal solution for Enterprise Search & GenAI Assistant across DD's knowledge silos
- Native connectors for integrating existing applications and enforcing permissions
- Knowledge Graph based on content, people and activity for relevancy
- RAG framework and citing sources for ensuring accuracy of results

Current State

Business as Usual

- Datadog has developed a tool internally for TSEs to faster address tickets called ‘co-pilot’
- Datadog utilizes Google Cloud Search (rolled out to entire organization of 6.5k employees)
- New employees take 6 months to onboard
- Datadog is scaling product-set from 30 products to 50 products

Negative Consequences

- **Inaccurate answers from co-pilot leading to more escalations & need for additional headcount in order to support current clientele**
- **Little to no usage of current search solution → making it impossible to achieve KPI of 25% employee productivity increase**
- **Tenured TSEs & Engineers are bogged down helping new employees ramping**
- **Slowed down product development timelines**

Future State

Required Capabilities

- Delivers accurate, context-aware answers with built-in fact-checking to reduce escalations and reliance on additional support headcount.
- Provides unified, organization-wide search and retrieval of content, ensuring employees find relevant information quickly and supporting productivity KPIs.
- Speeds up onboarding and knowledge transfer for new hires through automated summarization, classification, and accessible support tools.
- Seamlessly integrates with existing enterprise systems and scales to handle large data volumes, ensuring reliability, speed, and high adoption rates.
- Enforces robust security, data privacy, and governance with role-based access control and comprehensive compliance features.

Glean Benefits

- One, unified workplace search & knowledge discovery platform designed to make finding info & answers easier & automate work
- Search: surface all info across all apps & systems within Datadog
- Answers: generate answers grounded in company data, history, and context
- Personalize: source most relevant info based on employee role
- Secure: permission-aware, fully referenceable
- Automate: prompt & app library, automated agents to carry out work

Positive Business Outcomes for 2025

DATADOG

Standardize Enterprise Search:
- Eliminate application sprawl and speed up document retrieval
- Improve ability to find information across the *entire enterprise* in a single pane of glass
- Time to Value < 2 weeks

Avoid Hiring Additional FTEs:
- Deliver knowledge workers accurate and relevant info to who they are as employees so they can be more productive
- Providing highly-contextualized responses to aid faster decision making
- Increase Employee Ramp Time and Satisfaction

Single Source of Truth for: Single tool to replace 5+ in-tool AI add-ons
- **Search:** AI that finds what you are looking for
- **Chat:** AI that answers all of your questions
- **AI App/Agent Builder:** AI that works for you

Security:
- Single tenant Cloud-Prem AWS Deployment
- Permissions-Aware Access
- Advanced Security Reporting

The Value of Glean at Datadog

Product & Engineering (R&D)

- Eliminate 2+ hours per person in manually searching for & **pulling info from disparate wikis, docs, Slack, etc**
- Deploy Customer-Centric features faster → **Higher Revenue**
- Instant pulse on customer requests, issues → **Better roadmap prioritization**
- Get context on any project instantly **→ Faster onboarding**

TAMs, TSEs

- Resolve customer issues faster → **Higher NPS**
- Synthesize common complaints/requests for Product prioritization → **More customer-centric**
- Improve self-service and case deflection → **Reduce cost of Customer Support**

Sales, Solutions Engineering, CSMs

- 360 View of Customers and active opportunities → **Faster sales cycles**
- Constant pulse on competition → **Higher win rates**
- Instantly answer client questions on calls, inquiries, RFPs, etc. → **Onboard customers faster**

Corporate (Finance, Marketing, IT, HR, Ops)

- Find the right dashboard, Excel file, internal accounting memo etc instantly→ **Close books faster, improve reporting accuracy**
- Reduce # of IT Tickets raised → **Drive self-service**
- Embed access to institutional knowledge for every employee

Raise NPS with 35% + faster MTTR → Reduce churn, increase retention

Challenges

- Information is difficult to find and is stored across multiple systems
- Lose context switching between customers and applications
- Lose time on non-impactful tasks versus focusing on customer relationships
- Lose time relying on other teams to respond to customer questions
- Difficult to find experts in engineering or product
- Difficult to stay informed on new features, product changes, or internal discussions that impact customers

Tasks

- Gain a deep and holistic understanding of customers
- Quickly troubleshoot and resolve customer issues
- Speed up customer response times
- Stay informed on the latest feature and product updates

Glean solutions

- **Search** across your company to gain internal context or use **public knowledge** to get insights on your customers
- Identify issue resolution paths with **ticket overviews** and **suggested next steps** in **Glean in Zendesk and Service Cloud**
- 35% faster MTTR on average. Translate internal documents into customer communication with **Assistant**
- Stay informed and have access to the latest products and features with **search, Assistant, and advanced prompt capabilities**

Connected Apps
