Agenda:

- Glean introduction
- Business Impact at Millennium
- Commercials

glean

Why Anything

- Millennium is seeking to keep their competitive edge and are behind on the AI front - which they are cognizant of. They have identified enterprise search as a key business problem but have been unable to solve it (via building internally & purchasing externally) - which is hindering the technology org from faster servicing the traders, and hindering the traders from transacting faster.

Why Now

- This is a strategic-level initiative as this has not been able to be solved previously & are feeling the pain of 2:1 ratio of tech team to trader team.

Why Glean

- Instant solution for Enterprise Search & GenAI Assistant across existing tech stack
- Native connectors for integrating existing applications and enforcing permissions
- Knowledge Graph based on content, people and activity for relevancy
- RAG framework and citing sources for ensuring accuracy of results
- Web SDK allows to build permissions into existing internal AI tools

Current State

millennium

Business as Usual

- 2:1 ratio of technology team members to traders
- New employees take 4 months to onboard
- MLP has developed an internal RAG-based solution, which is a gateway to both internal and external large language models
- MLP uses their internal tool to manage complex policies, with plans to transition from. The system supports policy assist and general document AI, facilitating semantic search and question-answer capabilities around Citi policies.

Negative Consequences

- **Cannot scale as permissions has been a huge blocker in rolling internal tool out to all employees**
- **Ramp time for new employees increases as business grows & continues to rely on tenured employees**
- **Will need to hire additional headcount on technology side to better service traders**

Future State

millennium

Required Capabilities

- Centralized, unified search and automated knowledge capture across company systems, ensuring critical information and best practices are easily discoverable and preserved.
- Effective Onboarding Tools: Glean should facilitate faster onboarding of new employees, reducing the time from 4 months to a significantly shorter period. This can be achieved through comprehensive training modules and easy access to relevant information and documentation.
- Integration with Internal Systems: Glean must seamlessly integrate with MLP's business systems.
- Advanced AI and Automation Capabilities: Leveraging AI to assist in various workflows is essential. Glean should provide robust tools for automation and AI-driven insights to enhance productivity and decision-making processes.
- User Access Control and Permissions: Glean must ensure strict user access control and permissions management, displaying only the information users are authorized to see to maintain data security and compliance

Glean Benefits

- **One, unified workplace search & knowledge discovery platform designed to make finding info & answers easier & automate work**
- **Search: surface all info across all apps & systems within Millennium**
- **Answers: generate answers grounded in company data, history, and context**
- **Personalize: source most relevant info based on employee role**
- **Secure: permission-aware, fully referenceable**
- **Automate: prompt & app library, automated agents to carry out work**

Positive Business Outcomes for 2025

millennium

Standardize Enterprise Search:

- Eliminate application sprawl and speed up document retrieval
- Improve ability to find information across the *entire enterprise* in a single pane of glass
- Time to Value < 2 weeks

Avoid Hiring Additional FTEs:

- Deliver knowledge workers accurate and relevant info to who they are as employees so they can be more productive
- Providing highly-contextualized responses to aid faster decision making
- Increase Employee Ramp Time and Satisfaction

Single Source of Truth for: Single tool to replace 5+ in-tool AI add-ons

- **Search:** AI that finds what you are looking for
- **Chat:** AI that answers all of your questions
- **AI App/Agent Builder:** AI that works for you

Security:

- Single tenant Cloud-Prem GCP Deployment
- Permissions-Aware Access
- Advanced Security Reporting

Business Impact, Tech Outcomes & Capabilities

Business Impact #1

Drive Operational Efficiency in knowledge-based workers to allow for greater velocity for Traders

Technical Outcome(s)

- **User Adoption** (DAU, WAU)
- **Search Volume** (Total queries per week / user)
- **Search Quality**

Required Capabilities

- **Data Centralization** - Create a single pane of glass to all historical knowledge across strategic decisions, and internal analysis
- **Faster Information Retrieval:** Users say Glean saves time otherwise spent searching for information or pinging help channels.
- **Quicker Resolution Times:** Users report faster access to information and answers has significantly reduced ticket resolution times.

Business Impact #2

Decrease context switching by enabling automation, decreasing ramp time

Technical Outcome(s)

- **User Adoption** (DAU, WAU)
- **Search Volume** (Total queries per week / user)

Required Capabilities

- **Eased Onboarding:** Reduce pressure on onboarding buddies by enabling new hires to quickly find information and answers.
- **Time Savings:** Eliminate time wasted searching, pinging help channels, or interrupting others with questions.
- **Personalized Results** - Deliver relevant documentation and answers based on role and responsibility, while respecting permissions

Paths to validate Glean:

2-Month POC

- $10k Investment for shorter evaluation
- 5 OOTB data sources
- 12 month document crawl
- Executive alignment required
- Only supported for opportunities with 500+ users at contract start

100 User, 12 mo. Contract

- ~$90k (including implementation services, support, etc.) for 100 users, 1yr period.
- Unlimited data sources
- Full history document crawl
- Technical onboarding support
- AI Outcomes Manager
- Start capturing ROI now
- TOS & OF are the *only* documents Glean requires to be completed
